

# Git Basics

## Creating Feature Branch

- git checkout `base-branch`
- git fetch upstream
- git rebase upstream/`base-branch`
- git push origin `base-branch`
- git checkout -b `feature-branch`

## Adding Changes

- git add .
- git commit -m `Message`
- git push origin HEAD

## Updating Pull Request

- git checkout `feature-branch`
- git fetch upstream
- git rebase upstream/`base-branch`
- Make the changes to your files
- git commit -m `Message`
- git push origin HEAD --force

## Rebasing

- git checkout `feature-branch`
- git fetch upstream
- git rebase upstream/`base-branch`
- (you may need to `git {rm/add} <files>` at this point)
- git status
- git push origin HEAD --force

## Build Preview

- asciibinder clean
- asciibinder build -d openshift-enterprise
- `openshift-docs/_preview/openshift-enterprise/<feature_branch>/welcome/index.html`

## Updating Repo For New Release

- git checkout `main`
  - git checkout `enterprise-X.XX`
  - git push -u origin `enterprise-X.XX`
- 

Revision #2
